

COLLECTION & CONTAINMENT

Current collection and containment equipment offers improved designs and deployment capabilities that result in greater encounter rates and captured oil in more extreme operating conditions.

MODERN INNOVATIONS INCLUDE:

- Boom systems that allow for higher tow rates and low/no oil entrainment.
- Boom systems that can be deployed and managed by one vessel.
- Containerized and boom reel storage systems for accelerated boom deployment.
- Offshore boom strategies to cover larger geographic areas or cascade oil through multiple booming operations.
- More durable fabrics and boom components to withstand harsh operating conditions.
