

SOURCE CONTROL

Developments of recommended practices and improved technologies increase both the safety and the effectiveness of prevention and mitigation at the source of an oil spill.

MODERN INNOVATIONS INCLUDE:

- Establishment of a “two-barrier” philosophy
- Wells Expert Committee (WEC)
- Source Control Emergency Response Plan (SCERP)
- Improved capping stack and flow containment equipment
- Development of industry funded cooperatives to provide mutual aid
- Standardization of capping stack operations planning requirements and response time model preparation.
